Performance Ratings for Service Providers – Statistical Methods

Objectives

A primary objective of the analysis is to identify service providers whose performance may be sufficiently inferior as to warrant managerial review. A related objective of the analysis is to identify service providers whose performance may be sufficiently superior as to serve potentially as exemplars. In each case, we need to rely on the survey responses in a specified period.

Another primary objective of this analysis is to monitor the performance of service providers over time. This will allow for the detection of performance degradation or improvement that can signal new problems or the solution of previous difficulties in service provision at individual providers.

To achieve these objectives, we must use a performance measure that (1) objectively reflects provider performance as reported by veterans, (2) may be interpreted in a way that accomplishes the stated objectives, and (3) incorporates the influence of sample size in a statistically valid way.

The Data

The data for a given period consist of the survey responses provided by veterans who were served by one of the service providers during the period referenced. Our analysis focuses on the first four questions since they provide a high-level evaluation of the service received by the veteran. These questions and the possible responses to each are:

Q1. How would you rate the <u>quality</u> of the services you have received from this supportive services provider?	Excellent Above Average Average Below Average Extremely Poor
Q2. If another Veteran or a friend were in need of similar help, would you <u>recommend</u> this supportive services provider to him or her?	Definitely Probably So Probably Not Definitely Not
Q3. How <u>satisfied</u> are you with the services you have received from this supportive services provider?	Very Satisfied Satisfied Neither Satisfied nor Dissatisfied Dissatisfied Very Dissatisfied
Q4. If you needed help again and had a choice of where to go at no cost to you, would you <u>return</u> to this supportive services provider?	Definitely Probably So Probably Not Definitely Not

For each question, the two positive responses are highlighted. When a veteran provides one of the positive responses to a question, we say that the response is a *success*. All other responses constitute a *need for improvement*.

A Simple Approach

A simple, but inadequate, way to evaluate the performance of a service provider with respect to a given question is simply to compute the percentage of all responses to that question that are positive. For example, if 10 veterans served by a given service provider answered Q1 and if 8 of the responses were successful, then the percentage of successful responses would be 80%. If we sort the service providers according to their success rates from low to high, then those with the lowest success rates would appear near the top of the list while those with the highest success rates would appear near the bottom of the list.

However, this list would be misleading. If Service Provider A had only 1 veteran respond to Q1 and the response indicated a need for improvement, then their success rate would be 0%. If Service Provider B had 5 veterans respond to Q1 and only 1 response was a success, then their success rate would be 20%. It is clearly unfair to evaluate Service Provider A, who had only 1 opportunity for a success, below Service Provider B, who had 5 such opportunities. This simple method does not work because it does not incorporate the influence of sample size in a statistically valid way.

A Better Approach

Suppose that the nationwide success rate for Q1 is 70% for a given period, that is, 70% of all the responses received during the period from all veterans, across all service providers, were successes. Then, if Service Provider A above were an average service provider, it would have had a 30% chance of having no successes in one opportunity. Similarly, if Service Provider B above were an average service provider, it would have had a 3% chance¹ of having either 1 success or 0 successes in 5 opportunities.

Thus, we would give Service Provider A a rating of 30% and Service Provider B a rating of 3% for Q1. We interpret these ratings by saying that Service Provider A performed as well or better than 30% of all average service providers on Q1 and Service Provider B performed as well or better than 3% of all average service providers on Q1. Clearly, we should be more concerned about the performance of Service Provider B.

¹ The 3% probability is computed using the binomial distribution with $n=5$ and $p=0.7$. It represents the probability of exactly 1 success plus the probability of exactly 0 successes. Put another way, it is the cumulative probability for 1 success, that is, the probability of 1 or fewer successes in $n=5$ tries when the probability of success on each try is $p=0.7$.

In general, a rating of R% means that the service provider performed as well or better than R% of all average service providers on the given question.

Period-Over-Period Analysis: Individual Providers

The current period is October 1, 2016, through September 30, 2017 – we will refer to this period as Period 1. The previous period is March 1, 2016, through September 30, 2016 – we will refer to this period as Period 0. We compare the performance rating for each provider in Period 1 to that for the same provider in Period 0 using a standard two-sample, two-sided hypothesis test for the equality of two proportions. Service providers who report no client responses in either or both periods are excluded from this analysis.

Let π_0 be the population proportion of clients who rated the provider above average or excellent in Period 0, and let π_1 be the population proportion of clients who rated the provider above average or excellent in Period 1.

Hypotheses

$H_0: \pi_0 = \pi_1$: There has been no change in the population proportion

$H_A: \pi_0 \neq \pi_1$: There has been some change in the population proportion

Sample Data

Let n_0 be the sample size (number of client responses received) in Period 0, and let X_0 be the number of those client responses who rated the provider above average or excellent. Let n_1 be the sample size (number of client responses received) in Period 1, and let X_1 be the number of those clients who rated the provider above average or excellent in Period 1.

Define $p_0 = \frac{X_0}{n_0}$ and $p_1 = \frac{X_1}{n_1}$ be the sample proportion of clients who rated the provider above average or excellent in Period 0 and the sample proportion of clients who rated the provider above average or excellent in Period 1, respectively. Then $\bar{p} = \frac{X_0 + X_1}{n_0 + n_1}$ is the pooled proportion.

Test Statistic

Let $Z_{calc} = \frac{p_1 - p_0}{\sqrt{\bar{p}(1-\bar{p})\left(\frac{1}{n_0} + \frac{1}{n_1}\right)}}$. This test statistic is known to follow approximately a standard normal distribution, from which we compute the lower and upper critical values for our test statistic.

Decision Rule

For present purposes, we propose that the two-sided significance level be set at 10%. Then, if $Z_{calc} < -1.645$, then we conclude (at the 10% level of significance) that the service provider performed worse in Period 1 than they had in Period 0.

If $Z_{calc} > +1.645$, then we conclude (at the 10% level of significance) that the service provider performed better in Period 1 than they had in Period 0.

Finally, if $-1.645 \leq Z_{calc} \leq 1.645$, then we conclude (at the 10% level of significance) that the service provider's performance did not change from Period 0 to Period 1.

Period-Over-Period Analysis: System-Level

We perform the analysis described above for the entire system using the total number of client responses received and the total number of clients who rated the provider above average or excellent within each period. This analysis provides system managers with a top-level view of the system's overall performance change from Period 0 to Period 1.

Results

Provider and System-Level Performance Ratings

The provider performance ratings for FY2017 are attached. For each question (Q1, Q2, Q3, and Q4), the results are shown with the service providers sorted from low to high by provider rating for the given question. Provider ratings² less than 10% are shown with a red downward pointing arrow to indicate that the performance of these providers may be sufficiently inferior as to warrant managerial review. Similarly, provider ratings greater than 90% are shown with a green upward pointing arrow to indicate that the performance of these providers may be sufficiently superior as to serve potentially as exemplars. All other provider ratings are shown with a yellow rightward pointing arrow.

The results are also shown with the responses to Q1, Q2, Q3, and Q4 combined to provide an overall rating. We find that 94 of the 364 providers (25.8%) have an overall provider rating less than 10%, while 135 of the 364 providers (37.1%) have an overall provider rating greater than 90%. The remaining 135 providers (37.1%) have an overall provider rating between 10% and 90%. If all providers delivered equal levels of service, we would expect to find 36.4 providers with performance ratings below 10%, another 36.4 providers with performance ratings above 90%, and 291.2 providers with performance ratings between 10% and 90%. The P-value for this deviation from expectations is less than 0.00005 in a multinomial test (chi-square = 442.02 with 2 degrees of freedom).

The graph below shows a histogram of the Q1-Q4 provider ratings in Period 1. The remarkable features of this graph are the very large numbers of providers at the extremes. We find 74 providers with performance ratings below 5% and 118 providers with performance ratings above 95% while no other intervals contains more than 20 providers. If all providers delivered equal levels of service, each interval would contain roughly the same number of providers and this graph would appear nearly flat.

² Provider ratings are shown rounded to the nearest whole percentage.

Period-Over-Period Analysis

We have 34 new providers in Period 1, which cannot be part of this analysis. There are 330 providers for which we have data for both Period 0 and Period 1. As shown in the attached results, using the 10% level of statistical significance, 89 of the 330 providers (27.0%) exhibited worse performance in Period 1 than they had in Period 2, 43 providers (13.0%) exhibited better performance in Period 1 than they had in Period 2, and the remaining 198 providers (60.0%) exhibited no change. If all providers delivered equal levels of service in each period, we would expect to find 33 providers with performance ratings below 10%, another 33 providers with performance ratings above 90%, and 264 providers with performance ratings between 10% and 90%. The P-value for this deviation from expectations is less than 0.00005 in a multinomial test (chi-square = 114.56 with 2 degrees of freedom). The results are shown twice, once sorted by Z_{calc} and once sorted by the change in performance rating, known as the effect size.

At the system level, there were 10,679 responses to questions Q1, Q2, Q3, or Q4 in Period 0, 8,644 of which (80.9%) rated the provider above average or excellent. In Period 1, there were 21,634 responses to questions Q1, Q2, Q3, or Q4, 16,501 of which (76.7%) rated the provider above average or excellent. The drop of 4.2 percentage points is highly statistically significant (P-value < 0.00005).

Suggested Utilization of the Results

We suggest that service providers with the lowest overall ratings be reviewed. A reasonable first step would be to identify which questions are contributing to the low overall rating. In some cases, all four questions are contributing to the low overall rating. In other cases, only some of the questions are raising concerns. It can even happen that none of the questions has a rating below 10% individually, but their combined overall rating may be quite low.

We also suggest that changes in provider ratings from one year to another continue to be examined as additional data are collected. This will identify if earlier concerns have been properly addressed and if the trend over time is as desired. We have found that 89 service providers performed worse in Period 1 than they had in Period 0. It would be reasonable to investigate those providers with the most negative effect size (greatest drop in performance rating) and whose effect size is statistically significant, as indicated by its Z_{calc} . Of particular interest in this group would be those providers who serve many clients.

A reasonable way to perform these investigations would be to review the responses to the other survey questions. In addition, we suggest that a review of the verbatim responses, where the veterans have the opportunity to verbalize their concerns in ways that may not be possible in the other survey questions.

It is also important to investigate the 118 highest performing providers to discover what they are doing that is generating such high ratings. Once again, their responses to the other survey questions and their verbatim responses will provide insight into this issue. The goal would be to develop practice guidelines for service providers that identify what factors affect service quality in either direction.

At some point, it will become necessary to involve the management of the service provider in the search for ways to improve service. We recommend that the intervention be conducted in a cooperative fashion, making clear that the goal is to improve service delivery. Doing so may uncover systematic problems that affect all or many service providers; resolving these problems may have a dramatic and widespread positive effect.

Discussion

The systemwide performance rating dropped from 81.9% in Period 0 to 76.7% in Period 1. This drop of 4.2% is highly statistically significant. More than twice as many providers performed worse in Period 1 versus Period 0 than performed better (89 vs. 43).

It is quite clear that there are far more service providers than expected who are performing extremely poorly (rating less than 5%), and there are far more service providers than expected who are performing extremely well (rating greater than 95%), while the remaining service providers are distributed rather uniformly in the middle range. By focusing on these extreme performers, management can identify those service provider behaviors and characteristics that lead to better performance and can present these findings to service providers as evidence-based recommendations.

It may happen that some of the recommendations would involve system-level changes. By embracing both system-level and provider-level recommendations, management will demonstrate its commitment to the improvement of service delivery to its clients.

It will be important for service providers to recognize that this analysis will be repeated going forward and that performance changes will be monitored. It will also be important for service providers to understand that there will be both positive and negative consequences associated with the quality of service provision. The potential rewards and penalties need to be made clear at the outset so that there will be no misunderstanding when rewards are distributed and penalties are assessed. It will be critical

to create an atmosphere of cooperation in working toward the shared system objective of high quality service to all veterans.

Q6abc(Verbatim) Other Supportive Services

Veterans were asked a series of questions about which supportive services they needed and received. If they received the service, they were then asked about the quality of the service. After answering questions about fifteen different specific services (inclusive of such things as case management, health care and rental assistance), they were given the option to write in services not mentioned that they felt they needed. Of the 5,809 completed surveys, there were 529 respondents who identified “other” and then also indicated a specific service they needed. (Some of the “other” services indicated were actually duplicates of the original fifteen named services.) These 529 responses were first coded and then are tallied in the table below. Of all of the respondents, 51 answered more than one “other” service that they needed.

Service Category	<u>Needed this service</u>	<u>Received this service</u>
Administrative (ID, paperwork, etc.)	39	15
Automotive repairs	40	23
Bills/Fees	60	24
Clothing	25	16
Education	2	0
Employment	24	7
Food	63	33
Household Items	190	109
Housing	56	15
Legal	11	3
Medical/Dental	8	2
Personal/Emotional support	39	17
Relocation Assistance	18	4
Rx	3	0
Transportation	52	15
Miscellaneous	9	2

Q7(Verbatim) Is there any other feedback about the supportive services provider that you wish to provide to the VA?

Of the 5,809 completed surveys, 2,569 answered Q7. These 2,569 Verbatim responses were independently coded by two researchers with extensive experience coding qualitative data. The two sets of codes were then compared and quality controlled for consistency. Responses were coded 1) as either positive or negative; 2) as to what specific aspect of the service was being qualified (e.g. caseworker, communication, speed of service, etc.); and, 3) as to whether or not a suggestion for improvement was offered in the response. Each response could be coded as both positive AND negative, and could pertain to multiple service aspect categories; therefore, the sum of positive and negative comments is greater than the total number of respondents who answered this question.

In summary, 1,835 responses contained positive comments, and 819 contained negative comments. Regarding caseworker/staff, 856 contained positive statements and 169 contained negative comments. Regarding speed of service, 39 stated that they were happy, while 117 said they were unhappy. Regarding housing services, 166 respondents stated that they received housing services, and were happy with the service, while 50 respondents said that they received permanent housing services, but were displeased with the quality/cost of the accommodations. Forty-one respondents claimed to have been in need of housing services, and to have not received said services. Forty-two respondents said they were dissatisfied with the brevity of the program. Fifty-nine respondents said they were dissatisfied with the eligibility requirements to receive services. Sixteen respondents stated that they believed funding of the program to be insufficient. Seventy-nine respondents offered suggestions for improvement of the program.

Please note: if fewer than ten respondents commented on any one aspect of the SSVF program, that category was omitted from the breakdown below.

Positive: 1,835 comments

Positive – Caseworker: 856

Positive – Speed: 39

Positive – Specific Grantee: 122

Positive – System as Whole: 1,016

Positive – Specific Service (Employment): 26

Positive – Specific Service (Housing): 166

Positive – Specific Service (Furniture/Household Items): 13

Positive – Specific Service (Rent/Bills): 20

Negative: 819 Comments

Negative – Caseworker: 169

Negative – Communication: 211

Negative – Speed: 117

Negative – Specific Grantee: 52

Negative – System as Whole: 309

Negative – System, specific (Duration): 42

Negative – System, specific (Eligibility): 59

Negative – System, specific (Funding): 16

Negative – Lack of Follow-up: 17

Negative – Quality/Cost of accommodations, both permanent and temporary: 65

Negative – Specific Service Needed (Employment): 30

Negative – Specific Service Needed (Housing): 41

Negative – Specific Service Needed (Rent/Bills): 37

Negative – Specific Service Needed (Furniture/Household Items): 21

Negative – Specific Service Needed (Medical/Dental): 26

Negative – Specific Service Needed (Vehicle Repair): 14

Overall Findings

The aggregate of all completed surveys indicated a 76% satisfaction rating (above average or excellent) in Q1.

- Of the respondents who needed services and then received the services, ratings of overall satisfaction (Q1) ranged from 1.93% (health care) to 11.8% (assistance with emergency supply purchase) *higher* in satisfaction than the average of 76%.
- Of the respondents who needed services and did not receive the services, ratings of overall satisfaction (Q1) ranged from 15.3% (child care) to 69.5% (assistance with moving costs) *lower* in satisfaction than the average of 76%.

If a respondent needs a service and receives it, overall he/she is more satisfied with the program as a whole.

- Of the 856 respondents who had a positive comment about caseworker/staff in Q7 - “Is there any other feedback about the supportive services provider that you wish to provide to the VA?” - 94.5% rated overall satisfaction as above average or excellent.
- Of the 169 who had a negative comment about caseworker/staff in Q7, 15.9% rated overall satisfaction as above average or excellent.

Regardless of specific service need/receipt, Caseworker/staff interaction with the respondents is extremely important regarding respondent satisfaction with the program as a whole.

Appendix A

Period 1 vs. Period 0 Analysis

Ho: $\pi_0 = \pi_1$: There has been no change in population proportion
 HA: $\pi_0 \neq \pi_1$: There has been some change in population proportion

Period 0	
3/1/2016 - 9/30/2016	
$n_0 =$	10679
$X_0 =$	8644
$p_0 =$	0.809

Period 1	
10/1/2016 - 9/30/2017	
$n_1 =$	21634
$X_1 =$	16601
$p_1 =$	0.767

$p_1 - p_0 = -0.042$ Effect Size
 $\bar{p} = 0.781$
 $Z = -8.61$

Period 1 vs. Period 0	Number	Percentage
Worse Performance	89	26.4%
No Significant Change	205	60.8%
Better Performance	43	12.8%
Providers Evaluated	337	100%

Conclusion: Reject the null hypothesis that there has been no change in population proportion

	Period 1		Period 0					Effect Size	Test Statistic
	10/1/2016 - 9/30/2017		3/1/2016 - 9/30/2016		p_0	p_1	\bar{p}	$p_1 - p_0$	Z

Q1-Q4 Provider Rating	
Providers	374
Number < 10%	94
Number > 90%	135
Lower Quartile	9.6%
Median	68.4%
Upper Quartile	99.0%
Mean	56.6%
Standard Deviation	40.8%

The percentages in the table indicate that the service provider performed as well as or better than x percent of all average service providers. A red downward arrow indicates a rating below 10%. A green upward arrow indicates a rating above 90%. Yellow arrows indicate all of the providers in the mid-range (higher than 10% but lower than 90%).

The percentages in the table indicate that the service provider performed as well as or better than x percent of all average service providers. A red downward arrow indicates a rating below 10%. A green upward arrow indicates a rating above 90%. Yellow arrows indicate all of the providers in the mid-range (higher than 10% but lower than 90%).

Median	67.8%
Upper Quartile	93.7%
Mean	60.8%
Standard Deviation	33.9%

The percentages in the table indicate that the service provider performed as well as or better than x percent of all average service providers. A red downward arrow indicates a rating below 10%. A green upward arrow indicates a rating above 90%. Yellow arrows indicate all of the providers in the mid-range (higher than 10% but lower than 90%).

Q2: If another Veteran or a friend were in need of similar help, would you recommend this supportive services provider to him or her? --

cont'd
